

SOFTWARE TESTING · AI-FIRST EDITION (2026)

HW03 — GUI & Usability Testing on the Event Management System (EMS)

Design a shared GUI checklist · test your scenario · evaluate usability · go cross-platform.

Group + individual

4 scenarios A–D

3 tasks

AI-first

SUT: <https://promoter-starboard-prude.ngrok-free.dev/>

What you will deliver

Four graded tasks, one shared team checklist, everything logged the AI-first way.

1

GUI Checklist

A team checklist (>40 items) applied to your 3+ screens.

30 pts

2

Usability Report

Heuristic evaluation of the functions you own.

25 pts

3

Cross-Platform

3 OS × 5 browsers × 3 device types on your 3 screens.

25 pts

4

Findings + Skills

Submit bugs to the form; build reusable Agent Skills.

20 pts

EMS — Event Management System

A live web app of the Faculty of IT: create events, register, check-in, support, analytics.

<https://promoter-starboard-prude.ngrok-free.dev/>

WHAT IT DOES

- › **Admin side** — events, users, categories, check-in, support, settings, analytics.
- › **User side** — browse & register for events, get a QR ticket, rate events, ask for support.
- › **UI-rich** — forms, drag-drop reorder, uploads, rich-text, toasts, status colours, EN/VI.

<https://zalo.me/g/rupogxlykt3yxd3snodl>

student/guest account

One team checklist, one scenario each

You share the checklist; you own a scenario end-to-end.

GROUP · shared

- › Design ONE GUI checklist (>40 items).
- › Cover all four interface aspects IA-01...IA-04.
- › Submit checklist + reference sources + AI prompts.

INDIVIDUAL · your core

- › Pick ONE scenario: A, B, C or D.
- › List ≥ 3 screens of that function group.
- › Run the checklist, usability & cross-platform on them.

NO DUPLICATION Inside a group, no two members may own the same scenario and the same set of screens.

The four scenarios

Each maps to a function group of EMS. Everyone in the team should try to cover all four.

Admin creates & manages events

Event lifecycle: create, validate, configure, publish, approve, check-in.

User registers for an event

Public discovery & registration: browse, event detail, sign-up, QR ticket.

Admin manages users

User administration: roles, block/unblock, reset password, export.

User asks Support, Admin resolves

Support-request lifecycle across the user and the admin sides.

List at least 3 screens

Choose ≥ 3 screens from your scenario's function group (examples below).

A · Events

- Events list + status filters
- Add/Edit Event (upload, rich-text, date validation)
- Registration & Roles config
- Participants approval
- Check-in tab

B · Register

- Home + featured carousel
- Event detail page
- Registration form (roles, waitlist)
- My Registrations + QR ticket
- Post-event star review

C · Users

- Users list + filters
- Assign role / edit user
- Block / Unblock + Reset password
- Export to Excel

D · Support

- User: create request (+image)
- User: my requests + response
- Admin: requests list (Pending/Resolved)
- Admin: request detail + reply

GUI Checklist

Ground it in Nielsen / Norman / Shneiderman — then execute it on your screens.

PART A — SHARED (group)

- › > 40 items across IA-01...IA-04.
- › AI drafts it; you review & add missed items.
- › For each added item, say WHY AI missed it.
- › Submit checklist + sources + AI prompts.

PART B — EXECUTION (individual)

- › Run the checklist on each of your ≥ 3 screens.
- › Mark every item Passed / Failed per screen.
- › Notes column: reason for each Fail.
- › Screenshots for Failed items; log every bug.

User Testing → Usability Report

Design a scenario, run it with 5 real users, then analyse the results.

THE 5-USER PROTOCOL

- › **Design** — a goal-based task scenario on your screens.
- › **Recruit 5** — real users outside the class (contacts masked).
- › **Run sessions** — moderated, think-aloud, observe neutrally.
- › **Collect** — success, time, errors + SUS / UEQ-S + probes.
- › **Analyse** — rank by severity → prioritised recommendations.

WHAT TO COLLECT

- › Task success rate
- › Time on task
- › Errors / hesitations
- › SUS or UEQ-S score
- › Open-ended probes

Cross-Browser / Cross-Platform

Build a compatibility matrix for each of your 3 screens.

3

Operating systems

Windows · macOS · Android / iOS

5

Browsers

Chrome · Firefox · Safari · Edge · Opera

3

Device classes

Desktop · Tablet · Phone

COVERAGE Not all 45 combos — but hit every OS, every browser and every device class at least once, per screen.

TOOLS BrowserStack / LambdaTest trial · overlay MSSV@....edu.vn on every screenshot beside the EMS URL.

Bugs & usability findings

Every defect and suggestion goes to the form AND into one aggregated log.

1 • GOOGLE FORM

Submit each finding at:

`forms.gle/
CJQFQCAXcsDbXDMM9`

Use your student-ID email

`MSSV@...edu.vn`

2 • AGGREGATED LOG

- › One file consolidating all your findings.
- › Columns: ID · Screen · Type · Severity · Fix · Screenshot · Timestamp.
- › Must match your form submissions (TA cross-checks).

The AI-first rules

Use AI as a disciplined assistant — and prove it.

- › **Guide, don't dump** — drive the AI step-by-step through the technique, not one generic prompt.
- › **Human review** — you own the correctness; never submit raw AI output.
- › **AI Audit Report** — log every AI interaction: tool, time, prompt, output (mandatory appendix).
- › **AI Critique** — 200–300 words on where the AI was wrong, biased or incomplete.
- › **Anti-cheat** — real EMS screenshots, real cross-platform captures, real participants.
- › **Git log** — one commit per step: design, execution, bug logging, evaluation.

How it adds up

100 points across five graded components.

#	Component	Scope	Pts
1a	Shared checklist (>40 items) + sources + AI prompts	group	15
1b	Checklist execution on ≥ 3 screens + bug reports	individual	15
2	Usability Report (heuristics + severity + fixes)	individual	25
3	Cross-browser / platform matrix	individual	25
4	Findings submission (form) + aggregated log	individual	10
5	Agent Skills + demo videos	individual	10
Total			100

What to hand in

Individual ZIP + shared group artefacts on Moodle.

YOUR ZIP CONTAINS

- › Main report (Markdown + PDF).
- › Bug & Usability Findings Log.
- › Cross-platform screenshots (with your email).
- › AI Audit Report + AI Critique.
- › Git commit log + Agent Skills + README.

REMEMBER

Filename

<MSSV>_HW03_AI_
GUIUsability_EMS_<grade>.zip

- No late submission.
- Missing a required doc → 0.
- Shared prompts between students → 0.
- Oral defence: random 30%.

GET STARTED

Your first five moves

- 1 Form your team & pick who takes A, B, C, D.
- 2 Open the SUT and register your own user account.
- 3 Together, draft the >40-item checklist (AI + review).
- 4 List your ≥ 3 screens and run the checklist.
- 5 Evaluate usability, go cross-platform, log every finding.

Questions? lqv@fit.hcmus.edu.vn · and the TA team (see the brief).
